Art Unit: 2624

DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments filed 3/17/2003 have been fully considered but they are not persuasive.
 - * With respect to the IDS, the initialed copy of PTO-1449 is enclosed.
 - * The proposed drawing correction has been approved.
- * Regarding the rejections, the Applicants contend the PAA does not anticipate the claimed limitations. In contrast to the contention, page 3, lines 21-28, of the specification clearly teaches a conventional image coding apparatus and a conventional image decoding apparatus that can identify a coding mode (i.e., intra coding mode) of the VOP data only after it analyzes the coding type information (corresponding to the claimed intra-coded indicator information), and as a result, the coding type information indicating only the intra-coding, and a decoder in the decoding side for inherently multiplexing, into an image coded signal encoded by said encoder, coding type information (i.e., intra-coded indicator information) indicating all the images contained in a moving picture sequence are intra-coded.

For the foregoing reasons, it is believed the rejection should be sustained.

Art Unit: 2624

Drawings

2. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on 3/17/2003 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

Claim Rejections - 35 U.S.C. § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 4. Claims 1-17 and 19 are rejected under 35 U.S.C. 102(a) as being anticipated by the prior art described in the application (PAA).

Regarding claim 1, the PAA discloses:

- an analyzer for analyzing, in a coded bit stream, intra-coded indicator information indicating whether all images in a moving picture sequence are intra-coded or not (specification, page 3, lines 21-28);
- a decoder for decoding images contained in the moving picture sequence in response to the intra-coded indicator information analyzed by said analyzer (specification, page 3, lines 21-28,

Art Unit: 2624

in which the decoding side inherently decodes images contained in the moving picture sequence in response to the intra-coded indicator information, i.e., coding type information).

Regarding claim 10, since this claim is a method claim corresponding to apparatus claim 1, the discussion of claim 1 applies hereto.

Regarding claim 2, the PAA teaches the moving picture sequence is a video object layer VOL consisting of moving image object VO of given shape (Fig. 1; and specification, page 2, lines 26-29).

Regarding claim 3, the PAA teaches the moving picture sequence is a video object plane group GOV constituting a video object layer VOL consisting of moving image objects VO of given shape (Fig. 1; and specification, page 2, lines 26-29).

Regarding claims 4 and 11, the PAA teaches decoder decodes the images in the moving picture sequence with decimating them in response to the intra-coded indicator information and display rate information designated on the image decoding apparatus side (specification, page 3, line 30 - page 4, line 7).

Regarding claims 5-9 and 12-16, the PAA teaches analyzing, in a coded bit stream, coding side display rate information, and identifies images to be decoded in response to the coding side display rate information analyzed and to display rate information designated on the image decoding side, and wherein said decoder decodes the images contained in the moving picture sequence with decimating them in response to the intra-coded indicator information and display time information about the images to be decoded (specification, page 3, line 30 - page 4, line 7).

Art Unit: 2624

Regarding claim 17, the PAA discloses:

- an encoder for coding images contained in a moving picture sequence in response to

intra-coding instruction information indicating whether all images in a moving picture sequence

are intra-coded or not (specification, page 3, lines 21-28, referring to image coding apparatus);

- a decoder for inherently multiplexing, into an image coded signal encoded by said

encoder, intra-coded indicator information indicating all the images contained in a moving picture

sequence are intra-coded or not (specification, page 3, lines 21-28, referring to image decoding

apparatus) in which the decoding side inherently decodes images contained in the moving picture

sequence in response to the intra-coded indicator information, i.e., coding type information).

Regarding claim 19, since this claim is a method claim corresponding to apparatus claim

17, the discussion of claim 17 applies hereto.

Allowable Subject Matter

5. Claims 18 and 20 are objected to as being dependent upon a rejected base claim, but

would be allowable if rewritten in independent form including all of the limitations of the base

claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 18 and 20, the prior art, taken either singly or in combination, does not

teach:

Application/Control Number: 09/530,136

Art Unit: 2624

Page 6

- said multiplexer multiplexes for each moving picture sequence, when the intra-coded

indicator information indicates that all the images contained in a moving picture sequence are to

be intra-coded, display time multiplex identification information that indicates whether display

time information of all the images contained in the moving picture sequence is to be multiplexed

or not, and multiplexes for each moving picture sequence, when the display time multiplex

identification information indicates that the display time information of all the images contained in

the moving picture sequence is to be multiplexed, the display time information of all the images

contained in the moving picture sequence.

Conclusion

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR

1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this

final action.
